

Dear Client,

I would like to take a moment to introduce ourselves to you; we are a Structural Engineering Firm based in Maitland Florida, specializing in full service residential and commercial engineering designs. Florida Design Solutions (FDS), was established in 2002 to provide engineering designs at a great value while maintaining the highest level of integrity and professionalism in our industry. Our philosophy is to provide a safe, economical structure for the owner/builder in a timely fashion for all of our clients.

Our firm works off these three guidelines:

1. Always do what you tell the client you will do
2. Always produce more than what the client expects
3. Always deliver the project to the client before they expect it.

We would be proud to be a part of your design team and look forward to what our business relationship can build together. Our firm has grown in both size and knowledge to accommodate any engineering design. We have value engineered our details catering to our clients' needs from feedback from our clients over the years.

We would like you to consider us for your future engineering needs. In addition to our residential and commercial design departments, we have a truss design department which allows us to produce a preliminary truss design package. This allows our clients the ability to complete construction budgets faster than waiting on traditional truss engineer departments. Your truss design project is our only job, so you always are at the front of the line. Please take the time to review our company information and should you have any questions please feel free to contact us.

Carl Brown, PE  
Sr. VP / Director of Operations
